

Document Corruption

Occasionally, BrioQuery documents become corrupted. I've heard this complaint from numerous students and no one can seem to isolate the precise cause of the problem. One is that when users make a lot of changes to a document (i.e. deleting sections, then adding new sections) the volume and types of changes contribute to file corruption. Once the document becomes corrupted, the only thing you can do is find a backup copy of the document.

Given this problem, I recommend you save your documents frequently and save them under a different name. For example, first save the file as document1.bqy, then document2.bqy, then document3.bqy and so on. This way you won't lose your work.

Another hint: always save your work before you process the query. If you run into a problem with the processing and the Brio application shuts down, you'll lose your work.

NOTE: This Newscast was tested on Brio R6.2.0.75

Cabri Ltd. is a training company, distinguished by our in-depth knowledge of data warehouse query tools and industry insight. We specialize in product training, installation and custom course development for communication, manufacturing, e-business and public agency clients. Our focus is providing customers with innovative solutions and "value-added" approaches for training and product implementation.

Cabri Ltd. provides high quality training and consulting services at competitive prices. We maintain the highest standards of integrity with our customers and employees, priding ourselves in the quality training and customization services offered by our staff of trainers and developers.
